Fpga/fpgaverilog doc to pdf converterQ: Saving binary file using memory stream I have an application that needs to write a binary file to disk. The content of the file comes in a stream with a varying size. I'm using a memory stream to write the file on disk. All of my tests were to save the content of a byte array with a fixed length. This worked perfectly. When the data gets longer than the original buffer, I insert a null after the existing data and write the binary file. Works fine for smaller files. The problem is, the following code doesn't work and I can't figure out why. using (MemoryStream stream = new MemoryStream()) { while (dataRead == 1) { stream.Write(data, 0, data.Length); dataRead = Read(); } stream.Write((char) 0); // This is the issue stream.Flush(); stream.Seek(0, SeekOrigin.Begin); MemoryFileStream file = new MemoryFileStream(stream.ToArray(), false); using (var fileStream = new FileStream(Path, FileMode.Create)) { fileStream.CopyTo(file); } } The file gets written to disk, but the last character is 0. What gives? Edit: it's not the last byte. It's the last character. This is an ASCII file, so one character = one byte, and my stream contains 0x00 after all the data. Edit2: I made a test on a larger binary file, and I can't reproduce the issue. It works f678ea9f9e
